I have installed the Media Feature Pack, for Windows 10 But it didn't help So, is there someone who knows where to get the drivers? I have tried a lot of different searches, but almost all of then is about getting Windows 10 on the phone.. Kind regards Steffen ---Edit - Update 2--- Sorry all, I have completely forgot about this question.. If it doesn't it means that the phone has the problem If the phone has the problem then you should try a soft reset first, and if this doesn't work a hard reset.. Before that it was with Windows Phone 8 1 and Windows 8 1, but that didn't work.. First, try connecting your phone to another PC This way we will find out where's the problem.. Both could be answears, tried them, so I will mark them as that If I can, new to StackExchange/Stackoverflow.. The recovery tool can read the phone and software version So there is some connection.. If the issue is your PC then this post probably belongs to another site Why do i see many drivers? Below is a list of drivers that may be suitable for your device.
